Test Script:

Method	#	Test Description	Sample Input	Expected Output	Actual Output	P/F
promptName	1	Valid account name input	Input: Dela Cruz, Juan	Returns “Dela Cruz, Juan”	Returns “Dela Cruz, Juan”	P
	2	Invalid account name input with numbers	Input: Juan dela 67	Print: “Enter a valid account name: “ and reprompts	Print: “Enter a valid account name: “ and reprompts	P
	3	Invalid account name input due to empty input or solely whitespaces	Input: “ “	Print: “Enter a valid account name: “ and reprompts	Print: “Enter a valid account name: “ and reprompts	P
promptOption	1	Valid input ranging from 1 to 6	Input = 3	Returns 3	Returns 3	P
	2	Invalid input beyond 1 to 6	Input = -1	Print: “Invalid! Number must be between 1 and 6.” and reprompts	Print: “Invalid! Number must be between 1 and 6.”and reprompts	P
	3	Invalid input due to non-numeric values	Input = “esmeringhoy”	Print: “Invalid! Enter a valid number.”and reprompts	Print: “Invalid! Enter a valid number.”and reprompts	P
promptFloat	1	Valid float number input	Input: 67.00	Returns 67.00	Returns: 67.00	P
	2	Invalid negative float input	Input: -67.00	Prints: “Invalid Input!”	Prints: “Invalid Input!”	P
	3	Invalid input due to non-numeric values	Input = “rokunana”	Prints: “Invalid! Enter a valid float.”	Prints: “Invalid! Enter a valid float.”	P
promptYN	1	Valid yes character	Input = ‘Y’	Return true	Return true	P
	2	Valid no character with strings followed	Input = ‘nYes’	Return false	Return false	P

	3	Invalid character with strings followed	Input = ‘Hindi’	Prints: “Invalid input!” then reprompt	Prints: “Invalid input!” then reprompt	P
promptCurrency	1	Valid lowercase currency input	Input = “php”	Returns 1.	Returns 1.	P
	2	Invalid currency input due to non-existent currency.	Input = “AUD”	Prints: “Currency input does not exist.”	Prints: “Currency input does not exist.”	P
	3	Valid Uppercase currency input	Input = “USD”	Returns 2	Returns 2	P
accountIndex	1	Name entry matched the account in the collection	Input: Dela Cruz, Juan (exists in index 0 of bankAcconts)	Returns 0	Returns 0	P
	2	Name entry does not have any match in the collection	Input: Ako Bugoy	Prints: “Account Name is nonexistent.”	Prints: “Account Name is nonexistent.”	P
	3	The case sensitivity of the program to distinguish two different accounts.	Input: dela cruz, juan (does not exist)	Prints: “Account Name is nonexistent.”	Prints: “Account Name is nonexistent.”	P
registerAccount	1	Register a fresh new bank account	Input: Hector Salamanca	Adds a new object BankAccount with his name, 1000 pesos and currency of PHP	Adds a new object BankAccount with his name, 1000 pesos and currency of PHP	P
	2	Register a bank account with whitespaces around the name	Input: Walter White	Trims the name to “Walter White” and adds an object BankAccount with trimmed name, 1000 pesos and currency of PHP	Trims the name to “Walter White” and adds an object BankAccount with trimmed name, 1000 pesos and currency of PHP	P
	3	Register an existing account name	Input: Hector Salamanca (already exists at index 0)	Print:“This account already exists.” and terminates	Print:“This account already exists.” and terminates	P

				the function	the function	
depositAmt	1	Valid deposit process with PHP as the currency	Input: Hector Salamanca Currency: PHP Deposit Amount: 999	Prints: “Updated Balance = 1999.00”	Prints: “Updated Balance = 1999.00”	P
	2	Valid deposit process with recorded USD as the currency	Input: Hector Salamanca Currency: USD (50 PHP to 1 USD) Deposit Amount: 2	Prints: “Updated Balance = 2099.00”	Prints: “Updated Balance = 2099.00”	P
	3	Invalid deposit process due to depositing an amount from a no recorded currency.	Input: Hector Salamanca Currency: EUR (no record of exchange rate) Deposit Amount: 1	Prints: “Currency has no exchange rate record.” and terminates the function	Prints: “Currency has no exchange rate record.” and terminates the function	P
withdrawAmt	1	Valid withdraw process with PHP as the currency	Input: Hector Salamanca Currency: PHP Deposit Amount: 67	Prints: “Updated Balance = 933.00”	Prints: “Updated Balance = 933.00”	P
	2	Valid withdraw process with recorded EUR as the currency	Input: Hector Salamanca Currency: EUR (70 PHP to 1 EUR) Deposit Amount: 2	Prints: “Updated Balance = 793.00”	Prints: “Updated Balance = 793.00”	P
	3	Invalid withdrawal of money process due to withdrawing an amount from a no recorded currency.	Input: Hector Salamanca Currency: JPY (no record of exchange rate) Deposit Amount: 1	Prints: “Currency has no exchange rate record.” and terminates the function	Prints: “Currency has no exchange rate record.” and terminates the function	P
recordExRate	1	Record Exchange rate for PHP	Input: 1	Prints: "PHP is the base currency! Defaulting to 1.00."	Prints: "PHP is the base currency! Defaulting to 1.00."	P
	2	Record Exchange rate for USD	Input: 2 Rate: 67	Assigns 67.00F to currExMap[2]	Assigns 67.00F to currExMap[2]	P
	3	Record Exchange rate for JPY	Input: 3 Rate: 56	Assigns 56.00F to currExMap[2]	Assigns 56.00F to currExMap[2]	P

curExchange	1	Currency exchange between two recorded rates.	Source Option: 1 (PHP) Amount: 100 Exchange Currency: 2 (USD)	Print: “Exchange Amount: 1.49”	Print: “Exchange Amount: 1.49”	P
	2	Exchange between a recorded source rate and unrecorded foreign rate.	Source Option: 1 (PHP) Amount: 67 Exchange Currency: 5 (EUR)	Prints: “No recorded exchange rate for at least one of the currencies.” and prompts user to convert another currency	Prints: “No recorded exchange rate for at least one of the currencies.” and prompts user to convert another currency	P
	3	Re-exchanging an exchanged amount to its original currency	Source Option: 2 (USD) Amount: 1.49 Exchange Currency: 1 (PHP)	Print: “Exchange Amount: 99.83”	Print: “Exchange Amount: 99.83”	P
displayListOfDays	1	Display 3 - day expected daily Interest	Days: 3 Balance: 1000.00F Annual Interest: 0.05F	Prints a formatted table of 3 daily interest rows with 0.14 interest and 1000.14 as the first balance for the first day and increments 0.14 per day.	Prints a formatted table of 3 daily interest rows with 0.14 interest and 1000.14 as the first balance for the first day and increments 0.14 per day.	P
	2	Display a 1 day expected daily Interest	Days: 1 Balance: 1000.00F Annual Interest: 0.05F	Prints a row showing the interest as 0.14 and a balance of 1000.14	Prints a row showing the interest as 0.14 and a balance of 1000.14	P
	3	Display a 0 day expected daily Interest	Days: 0 Balance: 1000.0F Annual Interest: 0.05F	Only prints the header	Only prints the header	P
showIntAmt	1	Valid Inputs of name and days. Account exists.	Account Name: Hector Salamanca Days: 5	Shows the balance and currency of the account. The number of days prompted is	Shows the balance and currency of the account. The number of days prompted is	P

				equal to the number of rows generated.	equal to the number of rows generated.	
	2	Invalid input due to the account being non-existent.	Account Name: Hank Schrader	Prints:”Account does not exist.” and terminates the function	Prints:”Account does not exist.” and terminates the function	P
	3	Invalid Input due to negative number of days.	Account Name: Hector Salamanca Days: 5	Prints:”Invalid Number of Days!” and reprompts user to enter again	Prints:”Invalid Number of Days!” and reprompts user to enter again	P
